WHO IS AGUIDE?

Aguide® packaging machine and packing bag are in widespread used throughout Asia, Europe and America.

Aging population and the number of chronic disease patients is rising inevitably. Healthcare systems are limited to meet the increasing costs and demands. Seniors with short memories and office workers busied with their work lose the chance to get accurate medication. Shall medication non-adherence and medication errors appear, how to change the situation has become a conundrum.

With the greatest hope and expectation for a better future, we invent the machine. We offer a brand-new way to improve patients' compliance with medication and the quality of drug-therapy. Our cloud-based data system would store the record. You will never forget to take a dose.

Aguide® series

NO.1

For Household Use (AG1701/AG1702/AG1703/AG1704)

The packaging machine uses automatically packaging technology. The photoelectric sensor inductive pill box automatically reminds and records the medication time.

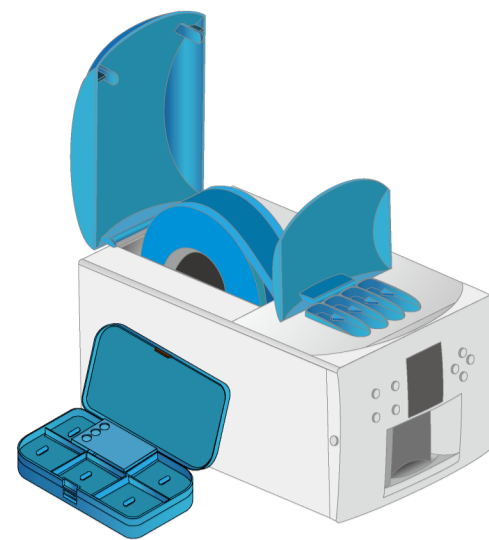

- Model AG-1702 and Model AG-1704 with built-in GPS function can send emergency text messages to the preset mobile phone number.
- Every operation is displayed on PC screen and controlled by keyboard.
- Four packaging time mode to choose: morning, noon, evening and bedtime.
- Offer more than 6 months of the medication data record.

NO.2

For Hospital Use (AG1705)

Pills sub-packaging accurately and administering on time. Data will be summarized for each patient in the hospital. One machine can be equipped with 20-30 pill boxes.

- Every operation is displayed on PC screen and controlled by keyboard.
- Four packaging time mode to choose: morning, noon, evening and bedtime.
- Packing pill system automatically prints out the pill administration time for patients.
- Packing pill automatically reminds the patient of medication time and records it.
- The PC query system can record more than 1 year of the medication data.

NO.3

For Clinic or Nursing Home Use (AG1706)

Data will be summarized for each patient at the nursing home and the community medical center.

- Every operation is displayed on PC screen and controlled by keyboard.
- Four packaging time mode to choose: morning, noon, evening and bedtime.
- Packing pill system automatically prints out the pill administration time for patients.
- Accurate medication time and records will be conveniently regulated by caregivers.
- The PC query system can record more than 1 year of the medication data.

NO.4

For pharmacy use(AG1705/AG1706)

The packaging machine for pharmacy use automatically packs pills after receiving the order. Data will be summarized. The medication report can be delivered by express.

- Every operation is displayed on PC screen and controlled by keyboard.
- Four packaging time mode to choose: morning, noon, evening and bedtime.
- Packing pill system automatically prints out the pill administration time for patients.
- The PC query system can record more than 1 year of the medication data.

It is far more than a machine.

We've spent several years trying to find a pioneering way to utilize the data in normalizing medication. With steady innovation, we work to foster a more secure medication environment.

GREATEST INNOVATIONS

Core Technique

Applying the Cutting-Edge of the Cloud Technology for information recording, tracking and analyzing. APP being developed at Aguide® R&D team makes it possible to join patients with caregivers via the Internet.

Medication Management

After your permission, the cloud technology would store the data, which will be sent to doctor, hospital, clinic and health care institutes for telemedicine.

Portable

The pill box can store 2 days or more dose of medicine and contain 8 independent packages. With the Aguide® health care system inside, you will never forget to take medicine. Even if you are on a vacation or business trip.

Ergonomic Design

Senior-friendly, the machine could best fit in the sitting posture.

Standard Packaging

Upon setting the pill administer time, the machine is able to print out the correct information (name, time, etc.) on the transparent pill package bag. Each package is in compliance with the hygienic standard.

Print

The packing pill system prints out date, user name and medication time. The information on every transparent package bag make sure that every pill the user takes is accurate.

Storage

The photoelectric sensor inductive pill box can store 2 days of pills. The screen on the box can record and display each time when you take out the pills.

Automatically Reminder

When it is time to take medicine, the LED of the pill box will be flashing and buzzer will beep.

Urgent Message Alert

Once user takes out the first aid pill, the machine will send emergency text messages twice to the preset mobile phone number hurriedly, notifying related personnel to contact the user in time.

CORE VALUE

We have made the world's first Home/Hospital multi-use intelligent micro pill packaging machine and photoelectric sensor inductive pill box. Aguide® is an automatic assistant to help you treat patients with chronic disease more safely and efficiently.

To get an integrate dose, you can put health care products, pills, capsules or any other medicines you want into Aguide®.

We are teaming up with some of the most creative researchers to give patients what they truly need: more specific medication and a convalescent body.

Power

300W,110-240V AC,50/60Hz with packaging machine,1000mA×24hr×7days battery of photoelectric sensor inductive pill box

Language

Both English and Chinese are available.

Connectivity

4G (worldwide frequency support)-Micro SIM

Applied Range

Pills diameter within 2 to 20 mm, not for non-solids such as spray, creams and ointments.

Availability

Asia, Europe and America

Support

Offer website online support and Email 24*7
Our global service & support network is being built.

Market

Hospitals, residences, clinics and health care institutes

Price

Amazing price, better than expected.
